SUBJECT INDEX TO VOLUME 28

Analytical microscopy
The dielectric description of inelastic electron scattering, *Schattschneider* 28 (1989) 1
Inner-shell spectroscopy, an atomic view, *Rez* 28 (1989) 16
Cross sections for inelastic electron scattering in solids, *Powell* 28 (1989) 24
High resolution energy-loss spectroscopy, *Batson* 28 (1989) 32
Dielectric theory of localised valence energy loss spectroscopy, *Walls and Howie* 28 (1989) 40
Coherence effects in plasmon excitation, *Schattschneider and Su* 28 (1989) 47
Quantification of white lines in electron energy loss spectroscopy (EELS), *Manoubi, Tencé and Colliex* 28 (1989) 49
Current problems in X-ray emission spectroscopy, *Goldstein, Williams and Lyman* 28 (1989) 56
Study and applications of channeled-electron-induced localized X-ray emission, *Glas* 28 (1989) 61
Local structural investigation of surfaces and interface by EELFS and EXAFS, *De Crescenzi* 28 (1989) 65
Problems in X-ray emission spectroscopy (summary), *Chapman* 28 (1989) 76
The evolution of the analytical electron microscope, *Van der Mast* 28 (1989) 81
Electron detection in the analytical electron microscope, *Chapman, Craven and Scott* 28 (1989) 108
The wavelength-dispersive spectrometer and its proposed use in the analytical electron microscope, *Goldstein, Lyman and Williams* 28 (1989) 162
Electron-energy-loss-based spectroscopies: a molecular viewpoint, *Hitchcock* 28 (1989) 165
Optimization of imaging energy filters for high-resolution analytical electron microscopy, *Rose* 28 (1989) 184
Spectroscopy techniques (summary), *Krivanek* 28 (1989) 213
Quantitative analysis of electron-energy-loss spectra, *Egerton* 28 (1989) 215
Processing and quantification of X-ray energy-dispersive spectra in the analytical electron microscope, *Zaluzec* 28 (1989) 226
Chemical mapping and multivariate statistical analysis (prospect), *Bonnet and Hannequin* 28 (1989) 248
On the effect of objective lens chromatic aberration on quantitative electron-energy-loss spectroscopy (EELS), *Titchmarsh and Malis* 28 (1989) 277
Evaluation of errors and accuracy of quantitative measurements (summary), *Craven* 28 (1989) 292
Analytical microscopy problems specific to highly divided solids, *Gallezot and Leclercq* 28 (1989) 308
Limits of detection sensitivity due to electron beam radiation damage, *Isaacson* 28 (1989) 320
Atomic sputtering in the analytical electron microscope, *Bradley and Zaluzec* 28 (1989) 335
Elemental analysis near the single-atom detection level by processing sequences of energy-filtered images, *Mory and Colliex* 28 (1989) 339
Definition of ultimate attainable spatial resolution (summary), *Scheinfein* 28 (1989) 359

Cross sections
The dielectric description of inelastic electron scattering, *Schattschneider* 28 (1989) 1
Inner-shell spectroscopy: an atomic view, *Rez* 28 (1989) 16
Cross sections for inelastic electron scattering in solids, *Powell* 28 (1989) 24
Theoretical analysis of inelastic electron scattering (summary), *Sevely* 28 (1989) 72

Detectors, photographic and other
Electron detection in the analytical electron microscope, *Chapman, Craven and Scott* 28 (1989) 108
Improved parallel-detection electron-energy-loss spectrometer, *Krivanek* 28 (1989) 118
Parallel recording for an electron spectrometer on a scanning transmission electron microscope, *Berger and McMullan* 28 (1989) 122
A quadrupole lens system for use in a parallel recording system for electron energy loss spectroscopy, *Scott and Craven* 28 (1989) 126
Two-dimensional CCD arrays as parallel detectors in electron-energy-loss and X-ray wavelength-dispersive spectroscopy, *Zaluzec and Strauss* 28 (1989) 131
X-ray detectors and spectrometers, *Lyman, Williams and Goldstein* 28 (1989) 137
Problems associated with EDX detectors from a manufacturer's point of view, *Lowe* 28 (1989) 150
The effect of magnetic fields on incomplete charge collection in Si(Li) X-ray detectors, *Craven, McHardy and Pears* 28 (1989) 157
A corrected double-deflection electron spectrometer equipped with a parallel recording system, *Haider* 28 (1989) 190
One- and two-dimensional electron detectors (summary), *Eades* 28 (1989) 209
X-ray detectors (summary), *Bentley* 28 (1989) 211

Electron energy loss spectroscopy
The dielectric description of inelastic electron scattering, *Schattschneider* 28 (1989) 1
Inner-shell spectroscopy: an atomic view, *Rez* 28 (1989) 16
Cross sections for inelastic electron scattering in solids, *Powell* 28 (1989) 24
High resolution energy-loss spectroscopy, *Batson* 28 (1989) 32
Dielectric theory of localised valence energy loss spectroscopy, *Walls and Howie* 28 (1989) 40
Applications of the near-edge and low-loss fine structure in the analysis of diamond, *Berger, Bruley, Brown and McKenzie* 28 (1989) 43
Coherence effects in plasmon excitation, *Schattschneider and Su* 28 (1989) 47
Quantification of white lines in electron energy loss spectroscopy (EELS), *Manoubi, Tencé and Colliex* 28 (1989) 49
Local structural investigation of surfaces and interfaces by EELFS and EXFAS, *De Crescenzi* 28 (1989) 65
Problems in electron energy loss spectroscopy (summary), *Leapman* 28 (1989) 74
Improved parallel-detection electron-energy-loss spectrometer, *Krivanek* 28 (1989) 118
A quadrupole lens system for use in a parallel recording system for electron energy loss spectroscopy, *Scott and Craven* 28 (1989) 126
Two-dimensional CCD arrays as parallel detectors in electron-energy-loss and X-ray wavelength-dispersive spectroscopy, *Zaluzec and Strauss* 28 (1989) 131
Electron-energy-loss-based spectroscopies: a molecular viewpoint, *Hitchcock* 28 (1989) 165
Optimization of imaging energy filters for high-resolution analytical electron microscopy, *Rose* 28 (1989) 184
Spectroscopy techniques (summary), *Krivanek* 28 (1989) 213
Quantitative analysis of electron-energy-loss spectra, *Egerton* 28 (1989) 215
Filtered dark-field and pure *Z*-contrast: two novel imaging modes in a scanning transmission electron microscope, *Haider* 28 (1989) 240
Chemical mapping and multivariate statistical analysis (prospect), *Bonnet and Hannequin* 28 (1989) 248
Spectrum-image: the next step in EELS digital acquisition and processing, *Jeanguillaume and Colliex* 28 (1989) 252
Imaging and recording of multiple scattering effects by angular-resolved electron energy-loss spectroscopy, *Reimer and Rennekamp* 28 (1989) 258
On the effect of objective lens chromatic aberration on quantitative electron-energy-loss spectroscopy (EELS), *Titchmarsh and Malis* 28 (1989) 277
Spectral processing for EELS, Auger and X-ray spectroscopies (summary), *Shumann* 28 (1989) 288
Medium-voltage EDX and EELS, *Loretto* 28 (1989) 302
Electron spectroscopic imaging of frozen-hydrated sections, *Probst Zellmann and Bauer* 28 (1989) 312
Analysis of small vanadium carbide precipitates using electron energy loss spectroscopy, *Craven, Cluckie, Duckworth and Baker* 28 (1989) 330
Elemental analysis near the single-atom detection level by processing sequences of energy-filtered images, *Mory and Colliex* 28 (1989) 339
Comparison of high spatial resolution in EDX and EELS analysis, *Titchmarsh* 28 (1989) 347

Electron probe microanalysis
Problems in X-ray emission spectroscopy (summary), *Chapman* 28 (1989) 76
Two-dimensional CCD arrays as parallel detectors in electron-energy-loss and X-ray wavelength-dispersive spectroscopy, *Zaluzec and Strauss* 28 (1989) 131
Problems associated with EDX detectors from a manufacturer's point of view, *Lowe* 28 (1989) 150
Processing and quantification of X-ray energy-dispersive spectra in the analytical electron microscope, *Zaluzec* 28 (1989) 226
Measurement of grain-boundary segregation by STEM-EDX analysis, *Vatter and Titchmarsh* 28 (1989) 236
Spectral processing for EELS, Auger and X-ray spectroscopies (summary), *Shuman* 28 (1989) 288
Medium-voltage EDX and EELS, *Loretto* 28 (1989) 302
Multivariate statistical analysis of electron probe microanalytical data on cell nuclear constituents, *Quintana and Ollacarizqueta* 28 (1989) 315
Atomic sputtering in the analytical electron microscope, *Bradley and Zaluzec* 28 (1989) 335
Comparison of high spatial resolution in EDX and EELS analysis, *Titchmarsh* 28 (1989) 347

High resolution
Survey of electron sources for high-resolution microscopy, *Orloff* 28 (1989) 88

High voltage
Specimen limitations in nanocharacterization by TEM/STEM of industrial heterogeneous catalysts: in situ, irradiation damage and micro/macro correlations, *Szymanski and Lynch* 28 (1989) 295

Image processing, 3D reconstruction
EMMPDL – An Electron Microscopy and Microanalysis Public Domain Library, *Zaluzec* 28 (1989) 283
Image processing (summary), *Engel* 28 (1989) 290

Imaging
Optimization of imaging energy filters for high-resolution analytical electron microscopy, *Rose* 28 (1989) 184
Spectrum-image: the next step in EELS digital acquisition and processing, *Jeanguillaume and Colliex* 28 (1989) 252
Imaging and recording of multiple scattering effects by angular-resolved electron energy-loss spectroscopy, *Reimer and Rennekamp* 28 (1989) 258

Instrumentation
The evolution of the analytical electron microscope, *Van der Mast* 28 (1989) 81
Survey of electron sources for high-resolution microscopy, *Orloff* 28 (1989) 88
Magnetic field emission gun with zirconiated emitter: performances at low voltage, *Troyon* 28 (1989) 98
Field emission gun for surface studies, *Morin, Lei He Ning and Pellerin* 28 (1989) 103
A quadrupole lens system for use in a parallel recording system for electron energy loss spectroscopy, *Scott and Craven* 28 (1989) 126
Two-dimensional CCD arrays as parallel detectors in electron-energy-loss and X-ray wavelength-dispersive spectroscopy, *Zaluzec and Strauss* 28 (1989) 131
X-ray detectors and spectrometers, *Lyman, Williams and Goldstein* 28 (1989) 137
Problems associated with EDX detectors from a manufacturer's point of view, *Lowe* 28 (1989) 150
The effect of magnetic fields on incomplete charge collection in Si(Li) X-ray detectors, *Craven, McHardy and Pears* 28 (1989) 157
The wavelength-dispersive spectrometer and its proposed use in the analytical electron microscope, *Goldstein, Lyman and Williams* 28 (1989) 162
A corrected double-deflection electron spectrometer equipped with a parallel recording system, *Haider* 28 (1989) 190
Design of a high-performance Auger spectrometer for the STEM, *Ouyang and Isaacson* 28 (1989) 201
Electron sources (summary), *Troyon* 28 (1989) 207

Methods and techniques
Applications of the near-edge and low-loss fine structure in the analysis of diamond, *Berger, Bruley, Brown and McKenzie* 28 (1989) 43
Current problems in X-ray emission spectroscopy, *Goldstein, Williams and Lyman* 28 (1989) 56
Theoretical analysis of inelastic electron scattering (summary), *Sevely* 28 (1989) 72
Problems in X-ray emission spectroscopy (summary), *Chapman* 28 (1989) 76
Spectroscopy techniques (summary), *Krivanek* 28 (1989) 213
Chemical mapping and multivariate statistical analysis (prospect), *Bonnet and Hannequin* 28 (1989) 248
Spectrum image: the next step in EELS digital acquisition and processing, *Jeanguillaume and Colliex* 28 (1989) 252
From experiment to interpretation: confidence limits, *Trebbia and Manoubi* 28 (1989) 266
Spectral processing for EELS, Auger and X-ray spectroscopies (summary), *Shuman* 28 (1989) 288
Evaluation of errors and accuracy of quantitative measurements (summary), *Craven* 28 (1989) 292
Multivariate statistical analysis of electron probe microanalytical data on cell nuclear constituents, *Quintana and Ollacarizqueta* 28 (1989) 315
Nanolithography using field emission and convential thermionic electron sources, *Devenish, Eaglesham, Maher and Humphreys* 28 (1989) 324
Specimen considerations, materials science (summary), *Titchmarsh* 28 (1989) 352
Specimen considerations, biological science (summary), *Revel* 28 (1989) 355
Definition of ultimate attainable spatial resolution (summary), *Scheinfein* 28 (1989) 359
Comparison with different existing techniques and suggestions for new methods (summary), *Poppa* 28 (1989) 361

New developments
Dielectric theory of localised valence energy loss spectroscopy, *Walls and Howie* 28 (1989) 40
Current problems in X-ray emission spectroscopy, *Goldstein, Williams and Lyman* 28 (1989) 56
Study and applications of channeled-electron-induced localized X-ray emission, *Glas* 28 (1989) 61
Magnetic field emission gun with zirconiated emitter: performances at low voltage, *Troyon* 28 (1989) 98
Filtered dark-field and pure *Z*-contrast: two novel imaging modes in a scanning transmission electron microscope, *Haider* 28 (1989) 240
Electron spectroscopic imaging of frozen-hydrated sections, *Probst, Zellmann and Bauer* 28 (1989) 312
Comparison with different existing techniques and suggestions for new methods (summary), *Poppa* 28 (1989) 361

Particle optics, experimental
Consideration of electron optics for transmission, reflection and emission geometries (summary), *Jouffrey* 28 (1989) 205

Particle optics, theory
Consideration of electron optics for transmis-

sion, reflection and emission geometries (summary), *Jouffrey* 28 (1989) 205

Radiation damage and contamination

Specimen limitations in nanocharacterization by TEM/STEM of industrial heterogeneous catalysts: in situ, irradiation damage and micro/macro correlations, *Szymanski and Lynch* 28 (1989) 295

Limits of detection sensitivity due to electron beam radiation damage, *Isaacson* 28 (1989) 320

Radiation effects (summary), *Humphreys* 28 (1989) 357

Scanning transmission electron microscopy

Parallel recording for an electron spectrometer on a scanning transmission electron microscope, *Berger and McMullan* 28 (1989) 122

Design of a high-performance Auger spectrometer for the STEM, *Ouyang and Isaacson* 28 (1989) 201

Measurement of grain-boundary segregation by STEM–EDX analysis, *Vatter and Titchmarsh* 28 (1989) 236

Filtered dark-field and pure *Z*-contrast: two novel imaging modes in a scanning transmission electron microscope, *Haider* 28 (1989) 240

Specimen limitations in nanocharacterization by TEM/STEM of industrial heterogeneous catalysts: in situ, irradiation damage and micro/macro correlations, *Szymanski and Lynch* 28 (1989) 295

Specimen preparation

Specimen considerations, materials science (summary), *Titchmarsh* 28 (1989) 352

Specimen considerations, biological science (summary), *Revel* 28 (1989) 355

Spectrometers, auxiliary apparatus

Improved parallel-detection electron-energy-loss spectrometer, *Krivanek* 28 (1989) 118

Parallel recording for an electron spectrometer on a scanning transmission electron microscope, *Berger and McMullan* 28 (1989) 122

X-ray detectors and spectrometers, *Lyman, Williams and Goldstein* 28 (1989) 137

A corrected double-deflection electron spectrometer equipped with a parallel recording system, *Haider* 28 (1989) 190

Surfaces, clusters, interfaces and particles

Local structural investigations of surfaces and interfaces by EELFS and EXFAS techniques, *De Crescenzi* 28 (1989) 65

Field emission gun for surface studies, *Morin, Lei He Ning and Pellerin* 28 (1989) 103

Measurement of grain-boundary segregation by STEM–EDX analysis, *Vatter and Titchmarsh* 28 (1989) 236

Specimen limitations in nanocharacterization by TEM/STEM of industrial heterogeneous catalysts: in situ, irradiation damage and micro/macro correlations, *Szymanski and Lynch* 28 (1989) 295

Analysis of small vanadium carbide precipitates using electron energy loss spectroscopy, *Craven, Chuckie, Duckworth and Baker* 28 (1989) 330

Abstracts/Announcements/Reviews/Miscellaneous

Foreword to Electron-beam-induced spectroscopies with high spatial resolution, *Colliex and Isaacson* 28 (1989) ix

EMMPDL – An Electron Microscopy and Microanalysis Public Domain Library, *Zaluzec* 28 (1989) 283

Summary and conclusions, *Isaacson and Colliex* 28 (1989) 363
